

# App Release Notes – 03.2026

## Fully Released Features

### Planned Maintenance

A planned maintenance banner now appears in the app, so you're always aware of upcoming maintenance at charging sites.

## Bug Fixes

### Subscriptions – cancelled != canceled typo

A typo in subscription status has been corrected for consistency, ensuring clear communication throughout the app.

### Get site details now, load even without session ratings

We've fixed an issue where some site detail pages wouldn't load correctly if there were no session ratings, so you can now view full site information every time.

### Planned sites removed from in-app charger list

We've removed planned (not-yet-live) sites from the in-app charger list, so you only see chargers that are actually available to use.

### Payment method updates now apply to active subscriptions

When you update your default payment method, your active subscriptions are now updated correctly too, helping avoid failed or missed payments.

### Social sign-up now completes successfully when invited via the portal

We've fixed problems with social sign-up flows for drivers added through the portal, so invited drivers can now register using their social accounts without errors.

### Charging cost now displayed correctly on the session screen

A bug that stopped charging costs from appearing correctly on the session screen has been resolved, so you can clearly see what you've spent.

## **Improved vehicle data accuracy from DVLA and EV database**

We've investigated and improved how we fetch vehicle data, so DVLA and EV database information in the app is fresher and more reliable.
