App Release Notes – 09.2026

🚀 Fully Released Features

Deficit payment Apple/Google Pay
We have introduced the ability to settle outstanding account deficits using Apple Pay and Google Pay directly within the app. This provides a faster, more secure way to clear balances and get back to charging without manual intervention.

Lockscreen charging notification should show "Included" instead of a PAYG price for subscription users
Subscription users will now see "Included" on their lockscreen notifications instead of a live price during active charging sessions. This change eliminates confusion by clearly showing that the session is covered by your existing bundle.

Take pre auth for kWh bundle subscriptions over allowance
The app now intelligently handles charging sessions that exceed your subscription's kWh allowance by taking a pre-authorization for the additional energy. This ensures uninterrupted charging sessions even when you go beyond your monthly bundle.
