App Release Notes – 10.2026

🚀 Fully Released Features

Add elapsed time (AC) or charge % (DC) to "in use" connector status in the app
Drivers can now see live charging progress directly in the app, with elapsed time for AC chargers and battery percentage for DC chargers. This provides better visibility for waiting drivers to plan their next charge.

App Home Screen - remove nearby promo banner
We've decluttered the home screen by removing the nearby promotion banner to provide a cleaner interface. This allows you to focus on the most important charging information without unnecessary distractions.

🐛 Bug Fixes

Active charging sessions not displayed in the app
We fixed a bug that prevented some active charging sessions from appearing in the app's dashboard. Drivers can now reliably see their live session details and stop charging directly from their phones.

Improve address textfields validation
We improved the way the app handles address and postcode entry to prevent errors caused by accidental trailing spaces. This makes the registration and profile update process much smoother and less prone to validation errors.
