

App Update – Release Notes 14.05.2025

This update brings a refreshed layout, smoother navigation, and a number of improvements to make charging quicker and more intuitive. Here's what's new:

New Navigation – Simpler, Clearer, More Intuitive

We've redesigned the bottom navigation bar to help you get where you need to go faster. The previous button layout has been replaced with a **standard 3-tab structure**:

- **Chargers:** Instantly view nearby chargers. Your favourite charger, if set, will now appear pinned to the top.
- **Map:** Find and filter chargers easily, and choose to open directions in Google Maps or Apple Maps.
- **Account:** Manage your details and feature controls located in one easy to find place.

Support for Google & Apple Maps

Prefer Google Maps? Or Apple Maps? Now you can use either to navigate directly to a charger – whichever app you're most comfortable with.

Smoother Experience Where It Matters

This release includes a range of fixes that directly improve your day-to-day use of the app:

- **Faster Access to Payment Options** – We've resolved a loading issue and improved speed when managing your saved payment methods.
- **Reliable Promo Updates** – Home screen promotions now update as expected, so you'll always see the latest offers.

App Update – Release Notes 14.05.2025

- **More Responsive App Performance** – Several background improvements to make navigation and key screens feel faster and more seamless.

Why this matters: These improvements help reduce friction, save you time, and ensure the app feels more responsive throughout your charging journey.

Email Receipts – Now Easier to Access

You'll now see a quick pop-up after your session if no email is on file. Enter your email and get your receipt sent directly to your inbox.

Streamlined Onboarding

We've removed extra steps when asking for location and notification permissions. Now, you'll only see your device's native prompts.

Clearer Guest Sign-In

We've combined the Sign In and Log In buttons to reduce confusion when using the app in guest mode.
