

Platform Release Notes – 04.2026

Fully Released Features

Default filtering to 7 days in the session log across all orgs

Session logs now default to showing the last 7 days, making it quicker to find recent activity and trends at a glance.

Roaming operator name dropdown should include parent/ancestor operators in hierarchy

Operators can now select from their full hierarchy in the roaming operator dropdown, making it easier to manage complex organisational structures.

Raise events for Charger status change

The system now raises events when a charger's status changes, improving monitoring and alerting for site operators.

Add ACP to session details page

You can now view the Access Control Profile (ACP) directly on the session details page, making support and troubleshooting much easier.

Tweak input spacing on onboarding modal

We've improved the look and feel of the onboarding modal by adjusting input spacing for a cleaner, more user-friendly experience.

Padding on long site name status

Long site names now display correctly, ensuring status indicators remain clear and easy to read.

OpenData Tariffs URL Clarification

We've clarified how OpenData Tariffs URLs behave when no public tariffs are set up, reducing confusion for operators.

Month-to-date option session log

A new month-to-date filter is now available in the session log, making it easier to analyse recent charging activity.

Ensure work (internal fuuse sessions) are shown on fleet dashboard

Fleet dashboards now include internal Fuuse sessions, giving fleet managers a complete view of all charging activity.

Platform Release Notes – 04.2026

Bug Fixes

Portal FE showing active subscription for user with cancelled subscription

Fixed an issue where cancelled subscriptions were incorrectly shown as active, ensuring accurate subscription status for users and support teams.

Hide "charger not found" banner in charger add flow

The "charger not found" banner is now hidden when appropriate, reducing confusion during the charger setup process.

Booking UI not representing the actual status of a charging sites.

Resolved a display issue where the booking UI did not accurately reflect the real status of charging sites.

Session Log - Disable Filters on Load

Filters in the session log are now disabled while data is loading, preventing errors and improving the user experience.

EVSE type disappears when editing location

Fixed a bug where the EVSE type would disappear when editing a location, ensuring your selections are retained throughout the process.
