

Platform Release Notes – 08.2026

Fully Released Features

Enhance clarity of RFIDs page in Fuuse

We have improved the RFID management page to clearly distinguish between cards that can charge and those that cannot, including better visibility for parental RFIDs. This update reduces confusion for fleet managers when assigning and monitoring charging access.

Bug Fixes

Utilisation report minutes unallocated to an hour on heatmap

To ensure reporting accuracy, we fixed a bug where charging minutes were not correctly appearing on utilisation heatmaps for ongoing sessions.

Session log shows "authorised through RFID card" for a session that was otherwise entirely app-managed

We corrected a labeling error in the session logs where app-started sessions were incorrectly showing as being authorized by an RFID card.
