Platform Release Notes – 09.2026

🚀 Fully Released Features

Enhanced EVSE Scheduling and Delay Settings
We have improved the consistency of charger configurations by ensuring that randomized delay and schedule settings are correctly applied across all editing flows. This update ensures that settings managed via the 'Edit EVSE' interface are now properly reflected when navigating through the 'Edit Location' workflow, providing a more reliable management experience.

🐛 Bug Fixes

QR Code Sticker Download Wording
Updated the 'Download Stickers' button text to more accurately reflect that it downloads the specific QR code, removing confusion during the charger setup process.

Scheduled Report Flexibility
Introduced a new 'Last Month (31 Days)' option for scheduled reports to ensure large data sets are delivered reliably without hitting system limits.

Bulk RFID Card Ordering Improvements
Fixed a validation error in the bulk RFID ordering process that required specific postcode formatting, allowing for smoother large-scale card deployments.

RFID Cross-Organization Validation
Updated the system to correctly recognize and permit RFID cards that were previously used across different organizations, improving roaming reliability for fleet drivers.

Gireve Roaming Session Stability
Identified and resolved a bug affecting Gireve roaming connections, restoring expected session volumes and authorization success rates.

Parent Dashboard Navigation
Fixed a navigation bug where clicking dashboard elements would cause the page to reload incorrectly, ensuring a smooth management experience for multi-org administrators.

Charger List URL Filtering
Improved the 'Chargers' page functionality so that navigating back from a specific charger detail view now correctly preserves your previous search filters.

Platform Release Notes – 09.2026

Bank Information Access
Fixed a 'white screen' error on the Bank Information page, allowing new organizations to successfully enter their details for revenue payouts.

Single-Phase Charging Performance
Corrected a bug where three-phase charging profiles were incorrectly sent to single-phase sites, restoring full charging speeds for affected users.

Driver Deletion Logic
Fixed a technical error that prevented drivers from being deleted if their associated payment record had already been removed, cleaning up administrative workflows.

Self-Onboarding Charger Visibility
Fixed a bug in the self-onboarding flow that caused some chargers to be partially created and invisible in the portal, ensuring all new hardware is ready for use immediately.

Access Control Profile Deletion
Resolved a database relationship error that prevented the deletion of old Access Control Profiles, allowing for cleaner organization management.

Bulk Driver Upload Capacity
Improved the reliability of the bulk driver upload tool to ensure that large spreadsheets with hundreds of entries are processed completely and accurately.
