# Platform Release Notes – 02.2026

## 🚀 Fully Released Features

### Tax rate should not be fixed to whole numbers
You can now enter decimal values for tax rates, making it easier to stay compliant with new tax requirements and ensuring accurate billing.

### Pop Up Notification about Live Mode
We've added a clear pop-up notification to help you understand when chargers become billable, reducing the risk of accidental charges.

### Mandatory onboarding flow - improvements
The onboarding process now includes clearer explanations and improved address handling, making it easier for new users to get started and manage reimbursements.

### Error log on sub issue details on parent issue
You can now view detailed error logs directly within issue details, making troubleshooting and resolving issues much faster.

## 🐛 Bug Fixes

### Site Bulk Upload - max power doesn't allow decimals
You can now enter decimal values for Max Power during bulk site uploads, improving data accuracy.

### Charger Flow - Revert Edit Flow Back to Old Flow
Restored the previous charger edit flow to ensure all necessary fields are available.

### Schedule not saving on EVSE for private chargers
Fixed an issue where schedules were not saving correctly for private chargers, ensuring your settings are always applied.

### Some drivers can't see promotions on WL apps
All drivers can now view available promotions in whitelabelled apps, so you never miss a deal.

### Site Details - Charger Name Natural Sorting
Chargers are now sorted in a natural order, making it easier to find the one you need.
